Luna Liu

UI/UX Designer | AI Products • Rapid HTML Prototyping • Complex Back Offices
pearl880517@gmail.com • Portfolio: p31741pearl.github.io/LUNA-LIU/?focus=prototype

About

UI/UX designer with five years of experience in complex back offices, design systems and AI products. At a hospitality-tech company I went from owning projects independently to being the company's only designer, owning everything from stakeholder interviews to engineering handoff. I use AI tools to turn designs into tokenized components and engineering guidelines, so design and engineering share one language.

Experience

UI/UX Designer — Aiello

Sep 2023 – Present • Taipei, Taiwan

- **AI workflow:** Used Figma MCP with Claude Code to convert specs into design tokens and a clickable HTML component library, plus Markdown brand guidelines for engineers
- **Sales enablement:** Built a working proposal prototype from the component library in one week, helping sales win the hotel business of a Japanese listed financial group (10+ hotels, ~3,500 rooms)
- **AI voice agent:** Redesigned conversation flows and failure handling; room-service orders (16% of all calls) completed by AI rose from 0% to 95%
- **User research:** Interviewed sales and frontline hotel staff, analyzed call logs and ran usability tests to drive design decisions
- **Back-office design system:** The company's TMS back office was built fast to launch, without a real design system. I audited live components with an AI-written crawler, built a Figma plugin to bring live pages back into design files, and defined scenario-based specs, consolidating 3–4 styles per component into one
- **GuestWeb SaaS:** Led early research for AI adoption and built a multi-brand design system and admin back office serving hotels with distinct brands, with no extra engineering cost per brand
- **Hardware–software integration:** Translated multi-vendor IoT control logic into consistent UI behavior; designed a Wellness feature combining animation, sound and lighting that directly won a new hotel client

UI Designer — 1177 Technology Co., Ltd.

Sep 2021 – Sep 2023 • Taipei, Taiwan

- Owned end-to-end UI/UX for four product lines: a financial back-office web platform, a consumer mobile payment app, the company website and an internal EIP system
- Built a brand-driven design system applied across all four products; delivered flows, mockups and specs for smooth front-end handoff
- Designed micro-interactions and animation assets for the app and web platform

UI Design Intern — AVerMedia Technologies

Jul 2020 – Sep 2020 • New Taipei, Taiwan

- Designed the startup lighting experience for the AX310 live-streaming mixer, pairing software UI with hardware LED effects; maintained the product UI design system

Education

National Taipei University of Technology • B.A., Interaction Design *2018 – 2021*

Skills

Design & research: Design systems, complex back offices & information architecture, interaction design, user interviews, usability testing, rapid prototyping (Figma & HTML), Figma

AI & front end: Figma MCP, Claude Code, design tokens, HTML/CSS, Figma plugins, AI prototyping

Motion & visual: After Effects, Illustrator, Photoshop

Languages: Mandarin (native), English (proficient in technical reading and writing)
